

Study Guide for Test #1

Go through all of your notes, making sure you understand **all** of the concepts that we covered.

Besides studying all of your notes, be prepared to create a Code-First application with authentication. The test will be timed so it is important that you ***practice*** creating an application like this several times, without your notes if possible, before the test.

Study the questions in the following three flashcard sets. These are **SOME** of the things you need to know but *not everything*! So don't forget to study your notes also.

<https://quizlet.com/520275865/flashcards>

<https://quizlet.com/521836111/flashcards>

<https://quizlet.com/526329414/flashcards>

There will be two parts to the test that will both be timed.

Multiple-Choice & Short Answer Part:

Short-answer and multiple-choice questions similar to quizzes. **Study as if you cannot use your notes because there will not be time for you to look up your answers!** You will have 45 minutes to complete this part.

Computer part:

- Starting with a scenario that I give you regarding two related entities, create an MVC app using Code-First with individual user accounts.
- Restrict certain pages based on log in and be able to fix the views.
- Record video running the application and show me some code.
- Practice this before-hand so you will be sure and finish in the time you are given. You will have 45 minutes to complete this part.
