

## Study Guide for Test #2

Study all of the notes from this unit and be prepared to answer questions regarding the concepts covered. The short answer/multiple choice part will be timed so don't expect to have time to look up answers in your notes. Study as if you won't have your notes available. I won't try to stop you from using your notes but you will run out of time if you have to do this for each question.

Besides studying all of your notes, be prepared to create an application similar to our PartyInvites application that we did in class. Be prepared to add validation and Bootstrap.

The test will be timed so it is important that you **practice** creating an application like this several times without your notes. I will allow you to use a Syntax Guide (see Canvas).

I will give you specific names for the application, methods, controllers, and views. This is to make sure that you start the project from scratch rather than altering a project that has already been created.

Set a timer for 50 minutes before you start the computer portion so that you will have time to create a video and submit it before your time runs out. ***It is your responsibility to show me by video what you have accomplished in 50 minutes. Your grade will be determined by what your video shows me that you've done. If you let the time run out before submitting the video, you will get 0 points for this portion of the test.***
