

## Study Guide for Test 3

There will be two parts to the test.

### **Multiple-Choice/Short Answer Portion**

To prepare for the test, study the notes carefully as usual and be sure you understand the concepts that were covered.

### **Computer Portion**

For the computer part, be prepared to add dependency injection to an existing application and also know how to hook an application up to a database. You will want to have the **ClassesForDatabaseAccess.pdf** open and ready to help you with this part (or you can print it out).

You won't need to use video proctoring this time.
